VISION:

To be a primary healthcare center dedicated to optimizing the health and well-being of our patients.

MISSION:

To add value to your life.

GOALS:

1. Stabilize Autonomic Function

Order bloodwork and other diagnostic tests to find out which organ systems are not working at optimum levels and support them with lifestyle and dietary changes along with nutritional supplementation.

2. Balance your Hemispheres

Do the neurological tests to find out which part of the brain has a decreased frequency of firing and use Brain Based Therapy to stimulate that area and balance brain function.

3. Prevent Further Neurological Degeneration

Malfunction of the CNS can lead to Alzheimer's, Dementia, Parkinsons, Neuropathy and other chronic conditions.

4. To enhance, extend, and have maximum positive impact on your life.

Joint pain decreases your quality of life and restricts your independence.

Informed Consent for Chiropractic

When a patient seeks chiropractic health care and we accept a patient for such care, it is essential for both to be working for the same objective. It is important that each patient understand both the objective and the method that will be used to attain it. This will prevent any confusion or disappointment. You have the right, as a patient, to be informed about the condition of your health and the recommended care and treatment to be provided so that you may make the decision whether or not to undergo chiropractic care after being advised of the known benefits, risks and alternatives.

Chiropractic is a science and art, which concerns itself with the relationship between structure (primarily the spine) and function (primarily the nervous system) as that relationship may effect the restoration and preservation of health. Health is a state of optimal physical, mental and social well being, not merely the absence of disease or infirmity.

One disturbance to the nervous system is called a vertebral subluxation. This occurs when one or more of the 24 vertebrae in the spine column become misaligned and/or do not move properly. This causes alteration of nerve function and interference to the nervous system. This may result in pain and dysfunction or may be entirely asymptomatic.

Subluxations are corrected and/or reduced by an adjustment. An adjustment is the specific application offered to correct and/or reduce vertebral subluxation. Our chiropractic method of correction is by specific adjustments of the spine. Adjustments are usually done by hand but may be performed by handheld instruments. In addition, ancillary procedures such as physiotherapy and/or rehabilitative procedures may be included.

We do not offer to diagnose or treat any disease or condition other than vertebral subluxation. However, if during the course of care we encounter non-chiropractic or unusual finding, we will advise you of those findings and recommend that you seek the services of another health care provider.

All questions regarding the doctor's objective pertaining to my care in this office have been answered to my complete satisfaction. The benefits, risks and alternatives of chiropractic care have been explained to me to my satisfaction. I have read and fully understand the above statements and therefore accept chiropractic care on this basis.
